#### **Preamble**

The objective of any programme at Higher Education Institute is to prepare their students for the society at large. The K. R. Mangalam University visualizes all its programmes in the best interest of their students and in this endeavor; it offers a new vision to all its Postgraduate courses. It imbibes a Outcome-Based Curriculum for all its Postgraduate programmes. This programme follows Choice Based Credit System (CBCS) and Learning Outcomesbased Curriculum Framework (LOCF). This approach is envisioned to provide a focused, outcome-based syllabus at the postgraduate level with an agenda to structure the teaching-learning experiences in a more student-centric manner. This approach has been adopted to strengthen students' experiences as they engage themselves in the programme of their choice. The postgraduate programmes will prepare the students for both, academia and employability. The programmes also state the attributes that it offers to inculcate at the postgraduation level. The graduate attributes encompass values related to emotional stability, well-being, critical thinking and also skills for employability.

There are 16 core courses, 2 skill enhancement courses, and 2 discipline specific elective courses in the M. Sc. Physics programme. The School acknowledges all the faculty members for their valuable contributions in making this handbook.

#### 1. Introduction

K.R. Mangalam University located on Sohna Road, Gurugram, is one of the fastest growing and most promising upcoming universities in India. It is a State Private University established in 2013 by an act of the legislature of the Haryana Government under Haryana Private Universities Act (Amendment) 8 of 2013. It is recognized by the UGC under Section 2f of the UGC Act, 1956. The primary aim of the University is to promote excellence in basic and professional education while upholding moral values.

KRMU offers sixty-eight Undergraduate, Postgraduate and Doctoral Degree programs across different disciplines. The group of educational units in the University promotes education in the areas of Engineering& Technology, Legal Studies, Basic and Applied Sciences, Management Sciences, Commerce, Journalism and Mass Communication, Hotel Management and Catering Technology, Medical and Allied Sciences, Architecture and Planning, Agriculture, Fashion Designing, Humanities and Education. All the disciplines follow a well-defined curriculum design keeping in view the guidelines of UGC/AICTE and appropriate regulatory bodies like Council of Architecture (COA), Bar Council of India (BCI), Pharmacy Council of India (PCI), National Council for Teachers Education (NCTE) etc., wherever applicable. All courses are semester and credit based.

#### K. R. Mangalam University is unique because of its

social and economic justice.

An enduring legacy of providing education to high achievers who demonstrate
leadership in diverse fields.
Protective and nurturing environment for teaching, research, creativity, scholarship

## **Objectives**

- i. To impart undergraduate, post-graduate and Doctoral education in identified areas of higher education.
- ii. To undertake research programmes with industrial interface.
- iii. To integrate its growth with the global needs and expectations of the major stake holders through teaching, research, exchange & collaborative programmes with foreign, Indian Universities/Institutions and MNCs.
- iv. To act as a nodal center for transfer of technology to the industry
- v. To provide job oriented professional education to the pecia student community with particular focus on Haryana.

#### 2. About School

The school imparts both teaching and research through its various science disciplines viz Mathematics, Chemistry and Physics.

School of Basic and Applied Sciences imparts students' disciplinary knowledge, enhances their skills and ability, motivating them to think ingeniously, helping them to act independently and take decisions accordingly in all their scientific pursuits and other endeavors. It strives to empower its students and faculty members to contribute for the development of society and Nation.

The faculty is in constant touch with various experts in the relevant fields and is willing to experiment with latest ideas in teaching and research.

	VISION
knowle	School of Basic and Applied Sciences intends for continuum growth as centre of ed learning, research and innovation by disseminating analytical and scientific edge in the areas of basic and applied sciences by promoting interdisciplinary research entific acumen.
	MISSION
□ fundan	M1: Enable students to be scientists/ academicians /entrepreneurs by accomplishing nental and advanced research in diverse areas of basic and applied sciences.
□ creatio	M2: Build strong associations with academic organizations/industries for knowledge n, advancement, and application of scientific fervor.
	M3: Create conducive environment for lifelong learning.
□ througl	M4: Empower students to be socially responsible and ethically strong individuals a value-based science education.

#### 3. Programmes offered by the school

School offers undergraduate B.Sc. (Hons) Programmes, postgraduate M.Sc. Programmes, and Doctoral Programmes. All these programmes are designed to impart scientific knowledge to the students and are aimed to provide theoretical as well as practical training in their respective fields.

## 3.1 Programmes in Physics

Tje School offers postgraduate M.Sc. Physics since 2015. This department established in 2014. This course emphasized on hands on practice, innovative thought process and project-based learning.

#### **Graduate Attributes**

GA1: To demonstrate competence in discipline specific theoretical and practical Knowledge

GA2: To develop creativity and innovation

**GA3:** To enhance communication and interpersonal skills

GA4: To enable critical & logical thinking and investigative research attitude amongststudents

GA5: To develop ethical values, teamwork and lifelong learning approach

#### **Program Educational Objectives (PEOs)**

**PEO1:** Foster advanced research capabilities for independent investigation and specialized exploration in diverse areas of physics.

**PEO2:** Develop adeptness in critical thinking and analytical reasoning for addressing intricate theoretical and practical challenges in the realm of physics.

**PEO3:** Cultivate strong communication skills and interdisciplinary collaboration to convey intricate scientific ideas and function efficiently within diverse professional environments.

**PEO4:** Instill a deep commitment to ethical practices and professional integrity in the application of physics knowledge and research.

**PEO5:** Prepare graduates for leadership roles and provide adaptability in navigating dynamic career trajectories within academia, research, technology, and industry.

#### **Program Outcomes (POs):**

M.Sc. Physics graduates should be able to:

PO1: Acquire advance science knowledge

PO2: Understand modern scientific education

**PO3**: Develop critical thinking and analytical ability

PO4: Establish new mechanism.

**PO5**: Work on application driven research

**PO6**: Work on entrepreneurship projects

**PO7**: Enhance societal impact through communication of research outcomes.

**PO8**: Acquire the capability to work independently or in a team.

**PO9**: Develop skills in solving problems in Physics and related discipline

**PO10**: Develop Technical Communication and presentation skills

## 4. M. Sc. Physics

This course aims to impart advance and applied knowledge in various branches in Physics with a view to produce good academics, researchers and professionals in the field.

**Eligibility Criteria:** - He/ She should have passed the B.Sc. (Hons.) Physics / B.Sc. withPhysics as a major subject, from a recognized University or equivalent with minimum 50% marks in aggregate.

**Course Outline:** - Mathematical Physics / Classical Mechanics / Quantum Mechanics / Electronic Devices / Statistical Mechanics / Electrodynamics and Plasma Physics / Atomic and Molecular Physics / Condensed Matter / Nuclear and Particle Physics.

Career Options: - Academics, Industry and Government Research Organizations.

#### **Program Specific Outcomes (PSOs):**

M.Sc Physics graduate student should be able to acquire:

**PSO1**: Understanding the advancement in physics in the area of classical mechanics, quantum mechanics and all related area of physics.

**PSO2**: Gain the experience and background required to model, analyse and solve advanced problems in physics.

**PSO3**: Critically analyse and independently assess and evaluate research methods using numerical methods and simulation techniques.

**PSO4**: Demonstrate the ability to use skills in Physics and its related areas of technology for formulating and tackling Physics related problems.

## 5. Programs Duration

The minimum period required for the M.Sc. Program offered by the University shall extend over a period of two Academic Years.

The maximum period for the completion of the M.Sc. Program offered by the University shall be four years.

## 6. Class Timings

The classes will be held from Monday to Friday from 09:10 am to 04:10 pm.

# 7. Scheme of Studies and Syllabi

The syllabi of M.Sc. Physics with course structure are given in the following pages.

<b>Total Contact Hours</b>	60				
Pre-requisites	Mathematical Physics-I				
Co-requisites					

#### **Course Objectives**

- 1. To make them learn about the calculus and its applications.
- 2. To enable them to use vector calculus for different applications.
- 3. To give knowledge of vector differentiation, integration.
- 4. To impart knowledge about orthogonal curvilinear coordinate, probability and dirac delta function and its properties.

#### **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Apply concepts of calculus in solving problems of interest to physicists.
- CO2. Better understand vector calculus and its applications.
- CO3. Understand use of vector differentiation and integration.
- CO4. Solve equations encountered in Physics and Engineering.

#### **Catalog Description**

This course aims to demonstrate the use of mathematical techniques in solving problems in Physics and to provide a deeper understanding of the mathematics underpinning theoretical physics. The course is intended to develop the concepts of vector calculus and its applications. Emphasis will be on illustrative examples from Physics and Engineering.

#### **Course Content**

#### **UNIT-I Vector Algebra:**

15 Lectures

scalar & vector product. geometrical interpretation. coplanarity.

Vector Calculus: differentiation of vectors. scalar and vector point function. gradient of a scalar function. normal and directional derivative. divergence and curl of a vector point function. line integral, surface integral, and volume integral. Stoke's theorem. Gauss' theorem of divergence.

#### **UNIT-II Algebra of Matrices**

15 Lectures

definition. types of matrices. addition, subtraction and multiplication of matrices. Inverse of a matrices. Cayley-Hamilton Theorem. power of a matrices. Eigenvalues and eigenvectors. Diagonalisation. Rank of a matrices. Solution of simultaneous equations. Cramer's Rule. Linear dependence and independence of vectors.

#### **UNIT-III Linear ordinary differential equations**

15 Lectures

first order: Order & degree of a differential equation. Formation of differential equations. Solution of a differential equation. Homogeneous differential equations.

Linear ordinary differential equations of second order: Wronskian. Complete solution, complementary function, particular integral.

#### **UNIT-IV Special functions**

15 Lectures

Legendre's equation; Legendre's polynomials; Legendre's function of the second kind; General solution of Legendre's equation; Rodrigue's formula; Recurrence formulae. Bessel's function: Bessel's equation; solution of Bessel's equation; Bessel's functions; Bessel's function of the second kind of order n; Recurrence formulae; Hermite Function: Hermite equation; Rodrigue formula (generating function of Hermite polynomials; Alternative expressions for the Hermite polynomials; Recurrence formulae. Laguerre's Function: Laguerre's equation; Laguerre's function for different values of n; Generating function of Laguerre Polynomial; Recurrence relation; orthogonal property.

#### **Course Objectives**

- 1. Learn the basics of an operational amplifier.
- 2. Develop an understanding of different types of operational amplifier connections /configurations.
- 3. Practical applications of operational amplifier.
- 4. Gain the insight of the 555 timer and its working.

#### **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Better understanding of working of IC741 operational amplifier (OP-AMP) which includes construction and configurations.
- CO2. Development of different electronic circuits by using OP-AMP.
- CO3. Comprehend the functioning of advanced IC555 which includes the construction and application parts.
- CO4. Improve the circuit designing & analysis ability.

#### **Catalog Description**

This course imparts the basic concepts of Operational Amplifiers (Op-Amp). Op amps are some of the most basic active components in analog systems. The course gives better insight about application part. Furthermore, with other external components, we can build waveform converters, oscillators, active filters, and other interesting circuits

#### **Course Contents**

UNIT-I 15 Lectures

Basic building blocks of linear integrated circuits, Operational Amplifiers (op-amps), circuit diagram, pin diagram of 741 IC, working of op-amp, open loop and closed loop configuration.

UNIT-II 15 Lectures

Types of feedback circuits in op-amps (positive and negative feedback). Design of amplifiers and oscillators using different types of feedback circuits (series and shunt configuration).

UNIT-III 15 Lectures

Various circuits based on op-amps such as adder, subtractor, differentiator, integrator, Zero Crossing detector, amplifiers, oscillators, Comparators, Schmitt trigger, Sine-wave generators, Triangular wave generator, Saw-tooth wave generator, filters (low pass filter, high pass filter, bandpass filter).

UNIT-IV 15 Lectures

555 timer IC: circuit diagram, pin diagram, working, monostable, bistable, and a stable multivibrators etc.

- CO2. Development of different electronic circuits by using OP-AMP.
- CO3. Comprehend the functioning of advanced IC555 which includes the construction and application parts.
- CO4. Improve the circuit designing & analysis ability.

#### **Catalog Description**

This laboratory course imparts the advanced experimental concepts of Operational Amplifiers (Op-Amp). Op amps are some of the most basic active components in analog systems. The course gives better insight into the application part. Furthermore, with other external components, we can build waveform converters, oscillators, active filters, and other interesting circuits.

- 1. Study of operational amplifiers, circuit diagram, pin diagram of 741 IC, working of opamp, open loop and closed loop configuration.
- 2. Study of types of feedback circuits in op-amps (positive and negative feedback).
- 3. Design of amplifiers and oscillators using different types of feedback circuits (series and shunt configuration).
- 4. Design of various circuits based on op-amps such as adder, subtractor, differentiator, integrator
- 5. Design of zero Crossing detector, amplifiers, oscillators

- 6. Comparators, Schmitt trigger, Sine-wave generators, Triangular wave generator,
- 7. Study of saw-tooth wave generator, filters (low pass filter, high pass filter, bandpass filter).
- 8. Study of 555 timer IC: circuit diagram, pin diagram, working, monostable, bistable and astable multivibrators etc.

Co-requisites					

#### **Course Objectives**

- 1. To understand the concept of Lagrangian formulation of mechanics.
- 2. To comprehend the Hamiltonian mechanics and application of Hamilton equations.
- 3. To acquire the knowledge of canonical transformations.
- 4. To gain the insight of moving coordinate systems and their effects.

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. The students will be able to understand the physics behind Lagrangian formulation and ways of solving different problems.
- CO2. Enable students to know the significance of Hamilton equations in finding solutions to problems.
- CO3. Explain the concept of canonical transformation.
- CO4. Understand the moving coordinate systems and effect of Coriolis and centripetal forces.

#### **Catalog Description**

This course imparts the understanding of constraints and the difficulty to obtain the solution using Newton laws and hence the need of understanding alternative methods to solve problems in mechanics. It imparts detailed study of Lagrangian and Hamiltonian formulation of mechanics, their respective equations of motion and implementation of such equations to solve problems. It assesses the different forms of Canonical transformations and their advantages. The course coherently covers the rotating frames and relative coordinate systems-importance of like Coriolis and centripetal force and their significant role in various phenomenon taking place on earth.

#### **UNIT-I Lagrangian Formulation**

#### 15 Lectures

Constraints and their classification, degrees of freedom and generalized coordinates, transformation equations, configuration space, virtual displacement and principle of virtual work, d'Alembert principle, Lagrange's equation of motion for conservative a nd non-conservative systems, Lagrange's equation for systems containing dissipative forces, Lagrangian formulation of conservation theorems- conservation of generalized momentum, energy, angular momentum, linear momentum and cyclic co-ordinates.

#### **UNIT-II Hamiltonian Formulation:**

15 Lectures

Phase space, Hamiltonian function, physical significance of Hamiltonian, Hamilton's equations, applications of Hamilton's equations, variational principle (Euler-Lagrange equation), Hamilton's principle, modified Hamilton's principle, derivation of Hamilton equations from modified Hamilton's principle, principle of least action.

#### **UNIT-III Canonical transformation:**

15 Lectures

Canonical transformation equations and their advantage, condition for a transformation to be canonical, Poisson brackets and its properties, Lagrange bracket and its properties, relation between Poisson and Lagrange bracket.

#### **UNIT-IV Moving Co-ordinate systems**

15 Lectures

Inertial and Non-Inertial systems, Galilean transformation, Galilean transformation for the velocity of the particle, rotating coordinate systems- Coriolis and centripetal forces, effect of Coriolis force on moving bodies on Earth, Foucault pendulum.

Version 2.0		4	0	0	4
<b>Total contact hours</b>	60				
Pre-requisites/Exposure	Basic Nuclear and Particle Physics				
Co-requisites					
_					

## **Course Objectives**

- 1. To acquire the knowledge of deuteron problem and nuclear forces.
- 2. To have an insight about various accelerators and detectors of nuclear particles.
- 3. To acquire knowledge of various nuclear electronic instruments.
- 4. To have an insight of production and properties of various elementary particles.

## **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Better understand the basic requirements of deuteron properties and neutronproton interactions.
- CO2. Understand various types of advance accelerators and detectors developed.
- CO3. Knowledge of various electronic instruments used to study nuclear particles and nuclear reactions.

CO4. Deeper understanding of different types of elementary particles, their properties and interactions.

## **Catalog Description**

This course is intended to cover the advancements of nuclear and particle physics. This course gives the theoretical explanations as well as the practical justifications of various concepts related to nucleons and their interactions. It discusses different accelerators and detectors used for the detection and acceleration of elementary particles. This course covers the interactions of elementary particles and instruments required to study the interactions.

#### **Course Content**

#### **UNIT-I Two Nucleon systems & Nuclear Forces:**

15 Lectures

Deuteron: ground state, wave equations and its solution, excited states, radius calculation using wave equation; Low energy Neutron-proton scattering; Scattering length; spin dependence of n-p interaction; Effective Range Theory.

UNIT-II 15 Lectures

#### **Accelerators and Detectors of Nuclear Particles**

Accelerators: Accelerators and their classification, ion sources, Electrostatic accelerators, Cockroft-Walton generator, Van de Graff accelerators, cyclotron, synchro- cyclotron, Principles of phase stability, betatron, betatron oscillations, electron synchrotron, Microtron, sector focused cyclotron, proton synchrotron (bevatron), Alternating gradient focusing, storage rings, linear accelerators.

UNIT-III 15 Lectures

#### **Nuclear radiation detection:**

Methods for the detection of free charge carriers, ionization chamber, proportional and Geiger-Muller counters, solid-state detectors, Methods based on light sensing, Scintillation detectors, Cherenkov detector, Methods of visualization of tracks of radiation, Wilson cloud chamber, bubble chamber, spark chamber, Nuclear Emulsion techniques, solid state nuclear track detectors,

#### **Nuclear electronics**

Pulse shaping, Pulse amplifiers, voltage discriminators, Pulse height analyzer, Counters: Binary and decade scalers.

#### **UNIT-IV**

## **Elementary Particles**

15 Lectures

Kinematics of high energy collisions, Production and properties of pi-mesons, Neutral pi-meson, Muons and their properties, K-mesons and hyperons, fundamental interactions in nature, classification of elementary particles, conservation laws, Anti-nucleons, Intrinsic Parity of the Pions, Resonance Particles, Symmetry Classification of Elementary Particles, Quark Hypothesis, Quantum Chromodynamics, Charmed Quark, Beauty and Truth, Weak Interactions, Unification of Weak and Electromagnetic Interactions.

## **Course Objectives**

- 1. Understanding the large-scale data by conduct experiments, as well as to analyse and interpret data.
- 2. Introduced and identify, formulate, and solve engineering problems, function on multidisciplinary teams
- 3. Understanding of professional and ethical responsibility.
- 4. Recognition of the need for, and an ability to engage in life-long learning.
- 5. Understand the design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Applied the knowledge and understanding to design and conduct experiments, as well as to analyse and interpret data.
- CO2. Applied the concept of different type of function in multidisciplinary area.
- CO3. Able to identify, formulate, and solve engineering problems.
- CO4. Recognize and determined of professional and ethical responsibility.

## **Catalog Description**

The course is aimed for participants working or conducting research in scientific computing. Covered topics in scientific computing will include numerical linear algebra, numerical optimization, ODEs, and PDEs. Participants will be introduced to advanced MATLAB features, syntaxes, and toolboxes not traditionally found in introductory courses. Material will be reinforced with in-lecture examples, demos, and homework assignment involving topics from scientific computing. MATLAB topics will be drawn from: advanced graphics (2D/3D plotting, graphics handles, publication quality graphics, animation), MATLAB tools (debugger, profiler), code optimization (vectorization, memory management), object-oriented programming, compiled MATLAB (MEX files and MATLAB coder), interfacing with external programs, toolboxes (optimization, parallel computing, symbolic math, PDEs). In exact, students learn how to apply the tools of calculus to a variety of problem situations.

#### **Course Content**

UNIT I 10 Lectures

**Introduction to MATLAB:** Starting and ending MATLAB session, MATLAB environment, MATLAB help, types of files, search path, some useful MATLAB commands, data types, constant and variables, Arithmetic, Relational and Logical Operators, built-in functions, Import and export of data, Working with files and directories.

UNIT II 10 Lectures

**MATLAB Programming:** Function files, sub functions, global variations, loops, branches and control flow.

**MATLAB Graphics:** Two-dimensional plots, multiple plots, style options, legend command, subplots, three-dimensional plots, Mesh and surface plots.

UNIT III 05 Lectures

**Advanced Functions:** Differentiation, Integration, Double integration, First and second order ODE, Publishing a report.

UNIT IV 05 Lectures

**Symbolic Processing With MATLAB:** Symbolic Expressions and Algebra, Algebraic and Transcendental Equations, Calculus, Symbolic Linear Algebra, ordinary and partial differential equation, Symbolic Tutors.

BSMA771A	ADVANCED MATLAB PROGRAMMING LAB	L	Т	P	С
Version 1.0		0	0	2	1
<b>Total contact hours</b>	15				
Pre-requisites/Exposure	Basic MATLAB				
Co-requisites	MATLAB software				

## **Course Objectives**

- 1. Understanding the large-scale data by conduct experiments, as well as to analyse and interpret data.
- 2. Introduced and identify, formulate, and solve engineering problems, function on multidisciplinary teams
- 3. Understanding of professional and ethical responsibility.
- 4. Recognition of the need for, and an ability to engage in life-long learning.
- 5. Understand the design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Test program output for accuracy using hand calculations and plotting the different type of the graphs.
- CO2. Analyses, the applicability and accuracy of matrix numerical solutions to linear systems of equations.
- CO3. Analyses and applied the matrix method for finding the higher power of the matrix.
- CO4. Demonstrate understanding of common numerical programing for finding the solution of Laplace and Wave equations
- CO5. Write efficient, well-documented MATLAB code and present numerical results in an informative way of different real-life problems.

#### **Catalog Description**

The course is aimed for working or experiential coding or conducting research in scientific computing. Covered topics in scientific computing will include numerical linear algebra, numerical optimization, ODEs, and PDEs. Participants will be introduced to advanced MATLAB features, syntaxes, and toolboxes not traditionally found in introductory courses. Material will be reinforced with in-lecture examples, demos, and homework assignment involving topics from scientific computing. MATLAB topics will be drawn from: advanced graphics (2D/3D plotting, graphics handles, publication quality graphics, animation), MATLAB tools (debugger, profiler), code optimization (vectorization, memory management), object-oriented programming, compiled MATLAB (MEX files and MATLAB coder), interfacing with external programs, toolboxes (optimization, parallel computing, symbolic math, PDEs). In exact, students learn how to apply the tools of calculus to a variety of problem situations

#### **Course Content**

- 1. Compute the sum of n integers.
- 2. Find the factorial of n numbers.
- 3. Plot the graph of any function.
- 4. Solutions of simultaneous linear equations.
- 5. Solution of algebraic / transcendental equations.
- 6. To find the largest Eigen value of a matrix using power-method.
- 7. Inversion of matrices
- 8. Numerical differentiation
- 9. Numerical integration
- 10. Solution of ordinary differential equations
- 11. Statistical problems on central tendency and dispersion
- 12. Fitting of curves by least square method.
- 13. To find the numerical solution of Laplace equation.
- 14. To find the numerical solution of Wave equation

**NOTE:** Ten experiments are to be performed, out of which at least seven experiments should be performed from above list. Remaining three experiments may either be performed from the above list or designed & setup by the concerned person as per the scope of the syllabus.

Version 2.0		4	0	0	4
Total contact hours Pre-requisites/Exposure	60 Calculus				
Co-requisites	Mathematical Physics-I				

## **Course Objectives**

- 1. To make them learn about the Fourier series expansion and its applications.
- 2. To enable them to use theory of errors on various types of data.
- 3. To give knowledge of special Functions such as Legendre, Bessel, Hermite and Laguerre and their properties.
- 4. To impart knowledge about various mathematical tools employed to study physics problems.

## **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Apply Fourier series expansion in solving problems of interest to physicists.
- CO2. Better understand data interpretation and error analysis.
- CO3. Understand use of special functions such as Legendre, Bessel, Hermite and Laguerre.
- CO4. Solve partial differential equations encountered in Physics and Engineering.

## **Catalog Description**

This course aims to demonstrate the use of mathematical techniques in solving problems in Physics and to provide a deeper understanding of the mathematics underpinning theoretical physics. The course is intended to develop the theory of errors, Fourier series, special functions and partial differential equations. Emphasis will be on illustrative examples from Physics and Engineering.

UNIT-I 15 Lectures

Fourier series: Dirichlet's conditions for a Fourier series; Advantages of Fourier series; Determination of Fourier coefficients (Euler's Formulae); Fourier Series for discontinuous functions.

Fourier Integral Theorem; Fourier sine and cosine integrals; Fourier's complex integral; Fourier transforms; Fourier sine and cosine transforms; Properties of Fourier transforms; Convolution.

UNIT-II 15 Lectures

Laplace transforms; Properties of Laplace transform. First shifting theorem; Laplace transform of unit function; Second shifting theorem; Convolution theorem.

Partial differential equations; Method of Forming Partial Differential Equations; Solution of equation by Direct Integration.

UNIT-III 15 Lectures

Orthogonal curvilinear coordinates, differential of arc length, geometrical significance of h1 and h2, differential operator, curl, divergence, Laplacian operator, curvilinear and spherical coordinates polar co-ordinates; Relation between cylindrical and spherical co-ordinates.

UNIT-IV 15 Lectures

Elementary probability theory; Addition law of probability; multiplication law of probability random variables, Binomial distribution, Poisson and normal distributions. Central limit theorem.

## **Course Objectives**

- 1. To acquire knowledge of Analog and Digital System
- 2. Better understanding Flip flops,registers and counters
- 3. Better understanding of Microprocessor and its working
- 4. Understanding of Semiconductor memories.

## **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Understanding the difference between Analog and Digital System and conversion from one system to another.
- CO2. Better understanding of registers and counters. How they are beneficial in day-to-day life.
- CO3. Provide knowledge about how microprocessors are useful in daily life applications.

CO4. Better understanding of semiconductor memories like RAM, ROM, static RAM, Dynamic RAM, PROM, EPROM.

#### **Catalog Description**

This course is intended to cover most of the basic topics of digital electronics including Number systems, Logic gates and logic families, Boolean Algebra and Simplification, Arithmetic circuits, Data Processing Circuits, various Flip-flops, Clocks and Timers and Shift registers & counters, Microprocessor 8085, Semiconductor memories (RAM, ROM, static RAM, Dynamic RAM, PROM, EPROM). This course gives the circuit knowledge to students and students will be even able start their startups. Course will also beneficial for students in day-to-day life.

#### **Course content**

UNIT-I 15 Lectures

Difference between analog and digital system, Ato D converter, Dto A converter, combinational circuits, comparator, Gray to Binary, Binary to gray converter.

UNIT-II 15 Lectures

Sequential circuits: Flip Flops (R S flip flop, JK flip flop, T flip flop, D flip flop), edge triggering, level triggering. Asynchronous inputs (PRESET and CLEAR), racing condition, Master-slave flip flop, Sequential circuits, registers(shift registers), timers and counters (asynchronous and synchronous counter, ring counter, Johnson counter).

UNIT-III 15 Lectures

Microprocessor 8085: Introduction, Basic Architecture, working, pin diagram Addressing modes and programming.

UNIT-IV 15 Lectures

Semiconductor memories (RAM, ROM, static RAM, Dynamic RAM, PROM, EPROM).

#### **Course Objectives**

- 1. To understand the concept of motion under central force.
- 2. To comprehend the features of Hamilton-Jacobi Theory and Action-Angle Variables
- 3. To acquire the knowledge of rigid body motion
- 4. To gain the insight of small oscillations

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. The students will be able to understand the physics behind stability of orbits and Kepler's problem.
- CO2. Enable students to know the significance of Hamilton-Jacobi Theory and Action- Angle Variables.
- CO3. Explain the concept of rigid body motion and different vectors involved in it.
- CO4. Understand the method of writing normal modes using eigen value equation.

#### **Catalog Description**

This course imparts the understanding of main aspects of the inadequacies of classical mechanics and insight of concepts of motion under central force. It assesses the application of Hamilton Jacobi theory using action angle variables as well as rigid body motion and equations for the detailed study of problem of small oscillations.

#### **Course Content**

UNIT-I 15 Lectures

**Motion under Central force**: Reduction to the equivalent one-body problem, general features of central force motion, equation of the orbit its features, Stability of orbits and conditions for closure, The Kepler's Problem: Motion under inverse square force, thevirial theorem, Scattering in a Central Force Field, Transformation of the Scattering Problem to Laboratory Coordinates.

UNIT-II 15 Lectures

Hamilton-Jacobi Theory and Action-Angle Variables: The Hamilton-Jacobi Equation for Hamilton's principal function, The Hammonic Oscillator Problem as an example of the Hamilton-Jacobi Method, The Hamilton-Jacobi equation for Hamilton's characteristic function, Action angle variables for systems with one degree of freedom,

UNIT-III 15 Lectures

**Rigid Body Motion**: Independent co-ordinates of rigid body, orthogonal transformations, Eulerian Angles and Euler's theorem, infinitesimal rotation, Rate of change of a vector, angular momentum and kinetic energy of a rigid body, the inertia tensor, principal axis transformation, Euler equations of motion, Torque free motion of rigid body, motion of a symmetrical top.

UNIT-IV 15 Lectures

**Small Oscillations**: Eigen value equation, Free vibrations, Normal Coordinates, Vibrations of a triatomic molecule.

#### **Textbooks**

☐ Classical Mechanics, Gupta, Kumar and Sharma.

#### **Reference Books/Materials**

Classical Mechanics, H. Goldstein, C. P. Poole, J. L. Safko, 3/e, 2002, Pearson Education
Classical Mechanics, John R. Taylor, 2005, University Science Books.

Total contact hours Pre-requisites/Exposure	60 Solid State Physics				
Co-requisites					

#### **Course Objectives**

- 1. Learn the basics of crystal structure.
- 2. Develop an understanding of X-ray diffraction patterns and accurate finding of crystal structure of materials.
- 3. Understanding the source of magnetic behavior of the materials.
- 4. Types of magnetism and their applications.

#### **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Better understanding of atomic arrangement inside the materials. and the factors which may influence the arrangement.
- CO2. Comprehend the functioning of X ray diffractometer and gaining knowledge about crystal structure prediction.
- CO3. Deep insight about the magnetic behavior and its origin.

CO4. Enhanced knowledge about the correlation between crystal structure and physical properties of materials which may useful to synthesize new materials.

#### **Catalog Description**

This course imparts the basic knowledge of construction of materials, microscopically. The course deals with the factors and conditions which are required to determine the crystal structure. The microstructure and physical properties are correlated, so dealing with the magnetic properties of the materials. The course further delivers keen understanding of magnetism and its application in technology.

#### **Course Content**

UNIT-I 15 Lectures

**Crystal Structure:** Lattice and basis, primitive and non-primitive cells, seven crystal system, crystal symmetry, Point groups, centrosymmetric and non- centrosymmetric point groups; Space groups; Packing fraction: SC, BCC, FCC and HCP; directions, planes and Miller indices; inter planer spacing; allotropy and polymorphism;

UNIT-II 15 Lectures

**Defects in crystal**: Thermal, point, line, surface and volume defects; Reciprocal Lattice, Bragg's law and reciprocal lattice.

X-Ray Diffraction Bragg`s law, X-ray spectroscopy, Diffraction directions, Diffraction methods, Diffraction under nonideal conditions.

UNIT-III 15 Lectures

**Intensities of Diffracted Beams:** Scattering by an electron, Scattering by an atom, Scattering by a unit cell; Structure-factor calculations, Multiplicity factor, Lorentz factor, Absorption factor, temperature, Intensities of powder pattern lines

UNIT-IV 15 Lectures

**Diamagnetism and Paramagnetism**: Magnetic Moments of Electrons, Magnetic Moments of Atoms, Theory of Diamagnetism, Diamagnetic Substances, Classical Theory of Paramagnetism, Quantum Theory of Paramagnetism, Gyromagnetic Effect, Magnetic Resonance, Paramagnetic Substances: Salts of the Transition Elements, Salts and Oxides of the Rare Earths, Rare-Earth Elements, Metals, Ferromagnetism, Antiferro-magnetism, Ferrimagnetism

#### **Course Objectives**

- 1. Learn to prepare a publishable document.
- 2. Understanding the typesetting system LaTeX.
- 3. Enhance computational and technical skills.
- 4. Understanding the typesetting of a book through LaTeX.

#### **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Learn a typesetting system that handles complex mathematical expressions.
- CO2. Understand the utility of different document such as article, book and beamer.
- CO3. Analyze how different packages provide additional typesetting characteristics.
- CO4. Write almost every form of publishing document ranging from small, medium or large to scientific.

#### **Catalog Description**

This course imparts the basic concepts of Latex Lab. It enables them to type mathematical documents and research paper. This course helps students in variety of ways to upload their own figures and tables in document. The course introduces the basic concepts about packages, commands and formatting of documents.

#### **Course Content**

Introduction to TeX and LaTeX, Type-setting a simple document, Adding basic information to a document, Environments, Footnotes, Sectioning and displayed material

Accents and symbols, Mathematical typesetting (elementary and advanced): Subscript/Superscript, Fractions, Roots, Ellipsis, Mathematical Symbols, Arrays, Delimiters, Multiline formulas, Spacing and changing style in math mode.

Graphics in LaTeX, Simple pictures using PSTricks, Plotting of functions, Beamer presentation.

#### **III-SEMESTER**

BSPH801A	ATOMIC AND MOLECULAR PHYSICS-I	L	T	P	С
Version 1.0		4	0	0	4
<b>Total contact hours</b>	60				
Pre-requisites/Exposure	Basic knowledge of atomic structure				
Co-requisites					
_					

#### **Course Objectives**

- 1. To understand the fundamentals of different atomic models and introduction of vector atom model.
- 2. To comprehend the features of Pauli Principle and shell structure
- 3. To acquire the knowledge of general features and doublet nature of alkali like spectra.
- 4. To gain the insight of the concept of spin and qualitative description of coupling schemes as well as the detailed theory of X-ray spectra.

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. The students will be able to learn the physics behind evolution of different atomic models, energy levels, spectral series of Hydrogen and discovery of Deuterium.
- CO2. Enable students to recall Pauli principle and the description of Fermions, Bosons in terms of wave functions.
- CO3. Understand the Alkali spectra and its features.
- CO4. Gain knowledge of the spin concept, coupling schemes and X- ray production mechanism and spectra.

#### **Catalog Description**

This course imparts the understanding of atomic models and explanation of spectra of Hydrogen like atoms, implementation of quantum concepts and spin orbit interaction for analysis of fine structure of Hydrogen spectral lines. It assesses the concept of Pauli Exclusion Principle to study the spectra of multielectron atoms. Further, it introduces the broad features of Alkali spectra and its explanation along with the qualitative description of Zeeman effect, Paschen—Back effect and Stark effect. In addition to this, there is detailed description of X-ray production and its spectral types.

UNIT-I 15 Lectures

**Atom Models:** Rutherford scattering experiment and the nuclear model of the atom, size of thenucleus, Bohr model of the atom: energy levels and spectral series.

Hydrogen and Hydrogen-like ions: Series in hydrogen, circular motion, nuclear mass effect, elliptical orbits, energy levels. Fine structure: basic facts and Sommerfeld theory, electron spin and spin-orbit coupling, relativistic correction and Lamb shift (qualitative), correspondence principle, discovery of deuterium, positronium and muonic atom energy levels compared to hydrogen energy levels, Franck-Hertz experiment.

UNIT-II 15 Lectures

Quantum (Vector) model of the hydrogen atom (no derivation) and quantum numbers, principal quantum number, orbital quantum number, magnetic quantum number, probabilistic electronic orbits (radial and angular), radiative transitions, selection rules.

Pauli's principle and shell structure: Systems with several electrons and spin functions. Symmetric and anti-symmetric wave functions, bosons and fermions, atomic shells and subshells.

UNIT-III 15 Lectures

Alkali-like Spectra: General features, doublet structure, Larmor's theorem and magnetic levels.

elementary theory of weak and strong magnetic fields, Zeeman effect in doublet spectra: anomalous Zeeman effect and the anomalous g-value, Paschen-Back effect, Stark effect (qualitative idea).

UNIT-IV 15 Lectures

Complex Spectra: Bohr magneton, spin of the electron, spin angular momentum, magnetic dipole moments due to orbital motion and spin of the electron, Stern-Gerlach experiment, LS-Coupling scheme, normal triplets, basic assumptions of the theory, identification of terms, selection rules, jj-coupling (Qualitative). X-rays: production, Laue's experiment, Bragg's law, X-ray spectra: continuous and characteristic spectra, X-ray emission spectra and Moseley law and X-ray series, Auger effect, X-ray absorption spectra and structure of absorption edges.

BSPH803A	ADVANCED QUANTUM MECHANICS-I	L	T	P	С
Version 1.0		4	0	0	4
Total contact hours	60				
Pre-requisites/Exposure	Quantum Mechanics				
Co-requisites	Mathematical Physics				

## **Course Objectives**

- 1. Acquire knowledge of Schrödinger's equation for spherically symmetric potentials, three dimensional cases.
- 2. Know about Hilbert space, operators as matrix; matrix form of a wave function, unitary transformation, change of basis; eigen value problem, and Schrödinger, Heisenberg and interaction matrix representation.
- 3. Explain physical meaning of identity, Symmetric and anti-symmetric wave functions, Exchange degeneracy, Particle exchange operator, Distinguishability of identical particles, the Pauli's exclusion principle and collision of identical particles.
- 4. Know about orbital angular momentum and total angular momentum operator and its commutation relations.

## **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Better understanding of 3D quantum mechanical systems and their co relation with real physical world.
- CO2. Use operator techniques to solve relevant problems.
- CO3. Comprehend the concepts of electronic spin and importance of spin to describe material behavior.
- CO4. Gain deeper understanding of angular momentum. Learn how coupling of angular momentum and spin takes place and their applications in various physical systems.

#### **Catalog Description**

This course is intended to cover most of the basic topics in quantum mechanics, including postulates, three-dimensional spherically symmetric potentials systems, angular momentum, operator methods, harmonic oscillators, hydrogen etc. This course gives theoretical explanations of experimental data and enhanced the analytical concepts.

## **Course Content**

UNIT-I 15 Lectures

Spherically Symmetric Systems: Schrödinger's equation for spherically symmetric potentials; three-dimensional harmonic oscillator (spherically symmetric case); the rigid rotator with free axis; the rigid rotator in plane; Hydrogen atom: solutions of  $\phi$ ;  $\theta$  and r equations; recursion formula; energy values; degeneracy; the normal states of hydrogen atoms, multi-electron systems and periodic table.

UNIT-II 15 Lectures

Elementary representation theory: Introduction; Hilbert space; operators as matrix; matrix form of a wave function; unitary transformation: change of basis; eigen value problem; Schrödinger, Heisenberg and interaction matrix representation; equation of motion in matrix form; Dirac's Bra and Ket notations; Matrix theory of harmonic oscillator; raising and lowering operators.

UNIT-III 15 Lectures

Identical Particles and Spins: Introduction; Physical meaning of identity; Symmetric and antisymmetric wave functions; Exchange degeneracy; Particle exchange operator; Distinguishability of identical particles; the Pauli's exclusion principle; collision of identical particles; Spin angular momentum; electron spin hypothesis; Pauli's spin matrices for electrons; Pauli's operators and their properties; Pauli's eigen values and Eigen functions; density operator and density matrix; symmetric and anti-symmetric wave functions of Hydrogen Molecule.

UNIT-IV 15 Lectures

Theory of Angular Momentum: Orbital angular momentum; Total angular momentum operator and its commutation relations; Eigen values of total angular momentum (J2), its component along z direction (Jz) and ladder operators (J+ & J-); explicit form of total angular momentum matrices; Clebsch-Gorden coefficients; addition of spin and orbital angular momentum; recursion relation of Clebsch-Gorden coefficients; electromagnetic transitions (selection rules on j and m).

BSPH805A	ADVANCED SOLID-STATE PHYSICS-II	L	T	P	С
Version 1.0		4	0	0	4
<b>Total contact hours</b>	60				
Pre-requisites/Exposure	Solid State Physics				
Co-requisites					

## **Course Objectives**

- 1. Learn the basics of quantum mechanical models behind physical properties.
- 2. Develop an understanding of origin of semiconducting properties of materials.
- 3. Understanding the source of dielectric behavior of the materials.
- 4. Types of superconductivity and its applications.

## **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Better understanding of role of atomic behavior behind the physical properties of the materials and the factors which may influence the properties.
- CO2. Comprehend the functioning of dielectric materials and gaining knowledge about the application part of the material in the field of core science and technology.
- CO3. Deep insight about the semiconducting behavior and its origin.

CO4.Enhanced knowledge about the superconductors and origin/theories behind super conducting phenomenon.

## **Catalog Description**

This course imparts the basic knowledge of construction of materials, microscopically. The course deals with the physical properties, like dielectric, superconducting and semi-conducting properties, of the materials. The focus of the course is on atomic origin of properties of the materials. The course further delivers keen understanding of utilization and applications of materials in the field of science and technology.

#### **Course Content**

UNIT-I 15 Lectures

## **Band theory**

Bloch theorem, the Kronig-Penny Model, constriction of Brillouin zones, symmetry properties of energy function, extended, reduced and periodic zones schemes, effective mass of an electron, the nearly free electron model, conductors, semiconductors and insulators.

UNIT-II 15 Lectures

#### **Semiconducting properties of Materials**

Semiconductors, carrier concentrations in intrinsic semiconductors, Fermi level; Statics of Extrinsic semiconductors: Fermi level, general equation for impurity semiconductor, Fermi level in an n-type semiconductor at very low temperature, Theory of n-type semiconductor, Theory of p-typesemiconductor, mobility of charge carriers, effect of temperature on mobility, electrical conductivity of semiconductors, Hall Effect, junction properties.

UNIT-III 15 Lectures

## **Dielectrics**

Dielectric constant, permittivity, microscopic concept of polarization, Langevin's theory of polarization in polar dielectrics, Local fields in solids and liquids, Classius-Mosotti relation, Static Dielectric constant in solids and liquids, Ferroelectricity, Piezoelectricity, dielectrics in AC fields, Ionic polarizability as a function of frequency, Complex dielectric constant of non-polar solids, Dipolar relaxation, dielectric losses,

#### **UNIT-IV**

Superconductivity 15 Lectures

Mechanism of superconductors, Effect of magnetic field, AC resistivity, Critical currents, Meissner Effect, Thermal properties, energy gap, Isotope effect, Mechanical effects, penetration depth, Type-I and Type-II superconductors, London equations, Superconductors in AC fields, Thermodynamics of superconductors, BCS theory, Quantum tunnelling, Josephson's tunnelling, DC Josephson's effect, Applications of superconductors.

BSPH851A	ADVANCED SOLIDSTATE PHYSICS-II LAB	L	Т	P	С				
Version 1.0		0	0	4	2				
Total contact hours Pre-requisites/Exposure	60 Solid State Physics								
Co-requisites									

## **Course Objectives**

- 1. The objective of the laboratory is learning through hands on experiment.
- 2. Develop an understanding of origin of semiconducting properties of materials.
- 3. Understanding the source of dielectric behavior of the materials and their experimental verification.
- 4. Applications of advanced materials.

## **Course Outcomes**

On completion of this course, the students will be able to:

CO1. Better understanding of role of atomic behavior behind the physical properties of the materials and the factors which may influence the properties.

CO2. Comprehend the functioning of dielectric materials and gaining knowledge about the application part of the material in the field of core science and technology.

CO3. Deep insight about the semiconducting behavior and its origin.

CO4. Enhancement in knowledge about the superconductors and origin/theories behind the superconducting phenomenon.

## **Catalog Description**

This course imparts the basic experimental knowledge of advanced of materials. The course deals with the physical properties, like dielectric, superconducting and semi-conducting properties, of the materials. The focus of the course is experimental verification of physical properties of the materials. In addition, course bridges the theoretical knowledge and its experimental counterpart. The course further delivers keen understanding of utilization and applications of materials in the field of science & technology.

#### **Course Content**

- 1. To find the band gap of intrinsic semi-conductor by using four probe method.
- 2. To determine the hysteresis loss of ferromagnetic material by using CRO.
- 3. To measure the dielectric constant of the material.
- 4. Determine the value of Hall coefficient for a given sample.
- 5. To study the temperature dependence of Hall coefficient of a given semiconductor.
- 6. Determine the Curie Temperature of a given ferroelectric material
- 7. Determine the specific heat of a given sample at room temperature.
- 8. Preparation of single crystals of copper sulfate using slow evaporation technique and identification of the c-axis of the newly grown triclinic crystal.
- 9. Determination of magnetoresistance of a given semiconductor for different magnetic field.

Co-requisites					

#### **Course Objectives**

- 1. To make them learn about the special techniques used in mathematical physics.
- 2. To enable them to use Laplace equation and electro-dynamical theory.
- 3. To give knowledge of electromagnetic waves, potential and fields.
- 4. To impart knowledge about radiation, electrodynamics and relativity.

#### **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Apply concepts of mathematical physics in solving problems of interest to physicists.
- CO2. Better understand Laplace equation, electro-dynamical theory and its applications.
- CO3. Understand use of electromagnetic waves, potential and fields.
- CO4. Solve equations encountered in Physics and Engineering.

#### **Catalog Description**

This course aims to demonstrate the use of mathematical techniques in solving problems in Physics and to provide a deeper understanding of the electrodynamics underpinning theoretical physics. The course is intended to develop the concepts of Laplace equation and electrodynamical theory and its applications. Emphasis will be on illustrative examples from Physics and Engineering.

#### **Course Content**

UNIT-I 15 Lectures

**Special Techniques:** Vector Algebra: vector operations, component form, scalar and vector product, double and triple product, vector transformation; Differential calculus: ordinary derivative, the del operator, gradient, divergence and curl, product rule and second derivatives; Integral Calculus: line, surface and volume integrals, fundamental theorems of gradients, divergences and curls; Curvilinear co-ordinates: spherical and cylindrical coordinates; The Dirac Delta function (1-D and 3-D forms); The theory of vector fields: The Helmholtz theorem.

UNIT-II 15 Lectures

Laplace's equations (1-D,2-D and 3-D forms), boundary conditions and uniqueness theorems, The method of images: classic image problem, induced surface charge, force and energy; Separation of variables(Cartesian and spherical coordinates); Multipole expansion: approximate potential at large distances, the monopole and dipole terms, the electric field of a dipole.

**Electrodynamical Theory:** Ohm's Law, electromotive force, motional emf, Faraday's law, induced electric field, inductance, energy in magnetic field, Maxwell's Equations and their significance, magnetic charge, Maxwell's Equations in matter.

UNIT-III 15 Lectures

**Electromagnetic Waves:** Waves in 1D: wave equation, boundary conditions, polarization; EM waves in vacuum: wave equation for E and B, monochromatic plane wave, energy and momentum: EMwaves in matter: propagation in linear media, reflectance and transmittance at normal and oblique incidence, absorption and dispersion: EM waves in conductors, reflection, the frequency dependence of permittivity; guided waves: wave guides, rectangular wave guide, co axial transmission line.

**Potentials and Fields:** Potential formulation: scalar and vector potentials, Gauge transformations, Coulomb and Lorentz gauge; continuous distributions: retarded potentials and Jefimenko equations, point charges: Lienard-Wiechert potentials, the field of moving charge.

UNIT-IV 15 Lectures

**Radiation:** Dipole radiation: electric and magnetic dipole radiation, radiation from an arbitrary source; Point charges: power radiated by a point charge, radiation reaction, physical basis of radiation reaction.

**Electrodynamics and Relativity:** The structure of space time, proper time and proper velocity, relativistic energy and momentum, relativistic kinematics, relativistic dynamics; Relativistic electrodynamics: magnetism as relativistic phenomenon, field transformation, field tensor, electrodynamics in tensor notation, relativistic potentials.

BSPH809A	THERMODYNAMICS AND STATISTICAL PHYSICS	L	Т	P	С
Version 1.0		4	0	0	4
Total contact hours	60				
Pre-requisites/Exposure	Basic Thermal and Statistical Physics				
Co-requisites					

## **Course Objectives**

- 1. To acquire knowledge of Thermodynamics and Kinetic Theory of Gases.
- 2. To have an insight into the Behavior of Real Gases.
- 3. To acquire knowledge of Quantum Theory of Radiation.
- 4. To have an insight of statistical distribution of particles and phase transitions.

## **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. Better understand the laws of thermodynamics and kinetic theory of gases.
- CO2. Understand behavior of real gases and the deviation from ideal behavior.
- CO3. Knowledge of various laws of quantum theory of radiation and their Experimental Verification.
- CO4. Deeper understanding of Bose-Einstein statistics, Fermi-Dirac statistics and phase transitions.

## **Catalog Description**

This course is intended to cover the laws of thermodynamics and statistical physics. This course discusses in detail various phenomenon governing the behavior of gases, deviation of real gases from ideal behavior. It also gives detailed account of quantum theory of radiations, blackbody radiation, associated laws and their experimental verification. The scope of this subject also includes ensembles, statistical distribution of particles and general theory of phase transitions.

UNIT-I 15 Lectures

**Review of Elementary Thermodynamics:** Laws of thermodynamics: zeroth, first, second and third, Carnot's Engine, Carnot's theorem, Thermodynamic Potentials U, H, F and G, Maxwell's Thermodynamic Relations

**Kinetic Theory of Gases:** Maxwell-Boltzmann Law of Distribution of Velocities in an Ideal Gas, Mean, RMS and Most Probable Speeds, Degrees of Freedom, Law of Equipartition of Energy Specific Heats of Gases, Mean Free Path, Collision Probability, Estimates of Mean Free Path, Transport Phenomenon in Ideal Gases: Viscosity, Thermal Conductivity and Diffusion, Brownian Motion and its Significance.

UNIT-II 15 Lectures

#### **Behavior of Real Gases**

Deviations from the Ideal Gas Equation, The Virial Equation, Critical Constants, Continuity of Liquid and Gaseous State, Vapor and Gas, Boyle Temperature, Van der Waal's Equation of State for Real Gases, Values of Critical Constants, Law of Corresponding States, Comparison with Experimental Curves, p-V Diagrams, Joule's Experiment, Free Adiabatic Expansion of a Perfect Gas, Joule-Thomson Porous Plug Experiment, Joule-Thomson Effect for Real and Van der Waal Gases, Temperature of Inversion, Joule-Thomson Cooling,

UNIT-III 15 Lectures

**Quantum Theory of Radiation:** Stefan-Boltzmann Law: Thermodynamic Proof. Radiation Pressure.

Spectral Distribution of Black Body Radiation. Wien's Distribution Law and Displacement Law. Rayleigh-Jean's Law. Ultraviolet Catastrophe. Planck's Quantum Postulates. Planck's Law of Blackbody Radiation: Experimental Verification. Deduction of (1) Wien's Distribution Law, (2) Rayleigh-Jeans Law, (3) Stefan-Boltzmann Law and (4) Wien's Displacement Law from Planck's Law.

UNIT-IV 15 Lectures

Review of Elementary Statistical Mechanics: B-E statistics,

Phase space, Ensembles, Probability, Bose-Einstein distribution, Fermi-Dirac statistics,

**General theory of phase transitions:** London theory, Nature of discontinuity of specific heat, Bose-Einstein transition, Critical exponents, Scale invariance, Critical dimensionality, Bethe approximation, Order parameter fluctuations in Gaussian approximation.

## **IV-SEMESTER**

BSPH802A	ATOMIC AND MOLECULAR PHYSICS- II	L	Т	P	С
Version 2.0		4	0	0	4
<b>Total contact hours</b>	60				
Pre-requisites/Exposure	Basic knowledge of Quantum Mechanics				
	-				
Co-requisites					

## **Course Objectives**

- 1. To understand the concept of molecular spectra- pure rotational spectra
- 2. To comprehend the features of vibrational rotational spectra
- 3. To acquire the knowledge of Raman spectra and formation of electronic spectra
- 4. To gain the insight of laser, its properties and lasing phenomenon in three and four level lasers.

#### **Course Outcomes**

On completion of this course, the students will be able to:

- CO1. The students will be able to recall the physics behind molecular spectra and its types
- CO2. Enable students to analyze the rotational, vibrational and vibrational rotational spectra through proposed models.
- CO3. Understanding the electronic spectra, Franck Condon principle and Raman effect.
- CO4. Understand the basic lasing phenomenon, spontaneous and stimulated emission of radiation, optical pumping and population inversion. Three level and four level lasers and laser types in detail.

## **Catalog Description**

This course imparts the understanding of main aspects of the molecular spectra and insight of central concepts of pure rotational spectra, vibrational rotational spectra-their models and determining equations. It assesses the concept of Raman spectra and provides understanding of electronic spectra in detail. In addition to this, there is detailed description of lasers and their types.

#### **Course Content**

Unit I: 15 Lectures

**Molecules and molecular spectra:** The Molecular bond, electron sharing,  $H_2^+$  molecular ion, Hydrogen molecule, complex molecules, types of molecular spectra and molecular energy states.

**Pure rotational spectra**: features of rotational spectra, Rigid rotator model, energy levels, spectrum

(no derivation of selection rules), non-rigid rotator.

UNIT-II 15 Lectures

**Vibrational–Rotational spectra**: Features, Molecule as aHarmonicoscillator: energy levels, spectrum, Anharmonic oscillator: energy levels, Vibrational frequency and force constants. Moleculeas vibrating rotator: fine structure of infrared bands.

**Raman Effect:** Quantum Theory of Raman Effect, Characteristics of Raman Lines, Stokes and Anti-Stokes Lines, Complimentary Character of Raman and infrared Spectra.

UNIT-III 15 Lectures

**Electronic Spectra**: Features and formation of electronic spectra, electronic energy and potential curves, Vibrational Structure of Electronic band in emission and absorption spectra, Rotational Structure of Electronic bands: General relations, branches of a band, band-head formation, Intensity distribution in a vibrational band system: Franck-Condon Principle,

Explanation of intensity distribution in absorption and emission bands using Franck-Condon principle. Fluorescence and Phosphorescence: Mechanism of emission.

UNIT-IV 15 Lectures

#### Lasers

Interaction of radiation with matter, Einstein A and B coefficients, Metastable states, Spontaneous and Stimulated emissions, Optical Pumping and Population Inversion, Optical Resonator, Three-Level and Four-Level Lasers, Semiconductor laser, Solid state laser, liquid and gas lasers.

#### **Textbooks**

☐ Atomic & Molecular Physics, Raj Kumar.

#### **Reference Books/Materials**

- ☐ Atomic, Molecular, Laser and Nuclear Physics, Dr. V.P. Seth, Dr. Nawal Kishore, Vijaya Publications.
- ☐ Modern Physics, A.K. Sikri.
- ☐ Modern Physics, Arthur Beiser.

BSPH804A	ADVANCED QUANTUM MECHANICS-II	L	Т	P	С
Version 1.0		4	0	0	4
Total contact hours	60				
Pre-requisites/Exposure	Quantum Mechanics				
Co-requisites	Mathematical Physics				

## **Course Objectives**

- 1. Acquire knowledge of time independent perturbed systems using Schrödinger's equation.
- 2. Know about the mechanism related to electronic transitions using time independent perturbed systems.
- 3. Explanation of physical significance of phenomenon of scattering quantum mechanically.
- 4. Deep insight about the co-relationship between relativity and quantum mechanics.

### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Better understanding of perturbed quantum mechanical systems and their applications
- CO2. Formulation of time-dependent perturbed systems and their correlation between experimental phenomena.

CO3. Comprehend the concepts of quantum mechanical treatment of scattering and applications.

CO4. Gain deeper understanding of relativistic quantum mechanical systems and their reduction in nonrelativistic form.

### **Catalog Description**

This course is intended to cover most of the basic topics in quantum mechanics, related to perturbed system. This course gives the theoretical explanations of perturbed systems (time independent and time dependent both) and co-relates the experimental data to theoretical aspects. Here the scattering problem tackled by quantum mechanically. Moreover, the course bridges different branches of physics, like spectroscopy, relativity etc, to quantum mechanics

#### **Contents**

UNIT-I 15 Lectures

**Approximation methods for stationary systems:** Time-independent perturbation theory: (a) non-degenerate and(b) degenerate. Applications to Zeeman effect, isotopic shift and stark effect. Variational methodand its applications.

UNIT-II 15 Lectures

**Approximation methods for time-dependent problems:** Interaction picture. Time-dependent perturbation theory. Transition to a continuum of final states – fermi's golden rule. Application to constant and harmonic perturbations. Adiabatic and sudden approximations.

UNIT-III 15 Lectures

**Scattering:** wave packet description of scattering. Formal treatment of scattering by green function method. Born approximation and applications. Partial wave analysis. Optical theorem.

UNIT-IV 15 Lectures

**Relativistic quantum mechanics:** Klein-Gorden and Dirac equations. Properties of Dirac matrices. Plane wave solutions of Dirac equation. Spin and magnetic moment of electron. Nonrelativistic reduction of the Dirac equation. Spin-orbit coupling. Energy levels in a coulombs field.

### **Textbooks:**

☐ Advanced Quantum Mechanics, Satya Prakesh, KedarnaathRamna	ath (2016).
--	-------------

☐ Introduction to Quantum Mechanics, D.J. Griffith, Prentice Hall (1994).

## Reference book(s) [RB]:

## **Course Objectives**

- 1. To make them learn about the Electronic, electrical, Optical, mechanical and chemical properties of nanomaterials.
- 2. To enable them to understand importance of nanoscale materials for sensing applications.
- 3. To give approaches used for fabrication and characterization of nanomaterials.
- 4. To give approaches used for tailoring nanomaterials for a specific sensing application.

## **Course Outcomes**

- 1. Apply concepts of nanotechnology for different applications
- 2. Better understand different characterization techniques
- 3. Understand use of metallic and semiconductor nanoparticles
- 4. Know about applications of Nanotubes, Nanowires and Quantum dots

### **Catalog Description**

This course is set to encourage the understanding of electronic, electrical, Optical, mechanical and chemical properties of nanomaterials. This course also gives the importance of nanoscale materials for sensing applications and approaches used for fabrication and characterization of nanomaterials and gives approach used for tailoring nanomaterials for a specific sensing application. This course also gives knowledge of metallic and semiconductor nanoparticles. Nanotubes, Nanowires and Quantum Dot.

#### Course content

UNIT-I 15 Lectures

This course will give thorough knowledge of the general principles of physics, chemistry and electronics that play a role on the nanometer scale and increase students' understanding of materials and their properties at the atomic and nanometer level, including an understanding of the intimate relationship between material scale (nanostructure) and the properties/functionality of materials.

UNIT-II 15 Lectures

Students will gain insight into the materials, fabrication and other experimental techniques that can be used on the nanoscale, as well as their limitations. This course will prepare students for nanotechnology by providing them with a sound grounding in multidisciplinary areas of nanoscience and nanoengineering.

UNIT-III 15 Lectures

Electronic, electrical, Optical, mechanical and chemical properties of nanomaterials. The importance of nanoscale materials for sensing applications. Approaches used for fabrication and characterization of nanomaterials.

UNIT-IV 15 Lectures

Approaches used for tailoring nanomaterials for a specific sensing application. Metallic and semiconductor nanoparticles. Nanotubes, Nanowires and Quantum Dot.

#### **Textbooks**

BSPH808A	FABRICATION OF ELECTRONICS DEVICES	L	Т	P	С
Version 1.0		4	0	0	4
Total contact hours	60				
Pre-requisites/Exposure	Basics of Electronics				
Co-requisites	Basics of Physics				

## **Course Objectives**

- 1. To Identify the fabrication methods of integrated circuits such as crystal growth, diffusion, ion implantation and thin film deposition etc.
- 2. To Understand fundamental challenges in fabrication techniques and possible solutions.
- 3. To understand the fabrication process such as Lithography, metallization and CMOS technology.
- 4. To gain Knowledge of basic limitations of different processes and how these integrate to achieve final device.

### **Course Outcomes**

On completion of this course, the students will be able

to

CO1. Design integrated silicon-based devices' process steps.

CO2. Understand all silicon fabrication processes, their metrologies and related theory.

CO3. Develop an understanding of the complexities involved in a complete fabrication cycle of an integrated circuit.

CO4. Gain knowledge of specifications of a clean room and other requirements of a fabrication lab.

### **Catalog Description**

Introduction to the basic steps and processes of fabricating integrated circuit semiconductor devices: crystal growth (thin film and bulk), thermal oxidation, dopant diffusion/implantation, thin film deposition/etching, and lithography. Introduction to process simulators, such as SUPREM. Fabrication and characterization of resistors, MOS capacitors, junction diodes and MOSFET devices.

#### **Course Content**

Unit-I 15 Lectures

Classification of Integrated circuits (IC), Steps of IC fabrication, Basics of structure and growth of crystals, crystal growth techniques such as Czochralski method, Bridgmann technique, zone melting method etc. Cleaning of wafers, and clean room specifications.

UNIT-II 15 Lectures

Methods of deposition of thin films such as vacuum evaporation, sputtering and chemical vapor deposition.

UNIT-III 15 Lectures

Thermal oxidation of Silicon, diffusion and ion implantation.

UNIT-IV 15 Lectures

Other fabrication steps such as lithography process, metallization, contacts, CMOS fabrication, and fabrication of passive components etc.

BSPH810A	LASER FUNDAMENTALS	L	T	P	С
Version 1.0		4	0	0	4
Total contact hours	60				
Pre-requisites/Exposure	Optics/Quantum Mechanics				
Co-requisites					

## **Course Objectives**

- 1. To familiarize the student with the fundamental characteristics of lasers.
- 2. To understand of the factors governing laser gain and laser output power.
- 3. To acquire knowledge of various pumping techniques.
- 4. To have an insight about laser cavity modes and different types of lasers available.

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Better understand the basic requirements of laser action and properties of laser light.
- CO2. Comprehend the concept of laser gain and optimization of laser output power.
- CO3. Understand suitable pumping technique for different types of lasers.
- CO4. Gain deeper understanding of different types of lasers and their applications.

#### **Catalog Description**

This course is intended to cover the fundamentals of lasers. This course gives theoretical explanations as well as the practical justifications of working principles of lasers. It discusses the requisites of lasing, factors affecting gain and output power, pumping techniques, various types of lasers and their applications. This course also makes a foundation for advanced courses such as optical fiber communication and photonic devices

#### **Course Content**

UNIT-I 15 Lectures

**Introduction to Lasers**: Definition of the Laser, Unique properties of a Laser, The laser spectrum and wavelengths, Population inversion, Pumping and characteristics of the laser beam, spontaneous and stimulated emission, coherence, Saturation intensity, Absorption and gain, Exponential growth factor, Threshold requirements for a Laser.

UNIT II 15 Lectures

Laser Oscillations above threshold: Laser gain saturation, small signal gain coefficient, Optimization of Laser output Power, Laser output fluctuations, Laser spiking, Relaxation oscillations, Decay time of laser beam within an optical cavity, Basic laser cavity rate equations, Laser amplifiers, Propagation of high power, short duration optical pulse through an amplifier.

UNIT III 15 Lectures

Laser pumping requirements and techniques: Excitation by direct pumping, excitation by indirect pumping, Specific pump and transfer processes, pumping geometries, pumping requirements, transverse pumping, End pumping, Diode pumping, Characterization of laser gain medium with optical pumping, Heavy particle pumping.

UNIT IV 15 Lectures

Laser cavity modes: Longitudinal laser cavity modes, Fabry Perot resonator, Febry Perot cavity modes, longitudinal laser cavity modes, longitudinal mode number, requirement for the development of longitudinal laser modes, Transverse laser cavity modes, transverse mode frequencies, Mode characteristics, Effect of gain on mode, Types of pumping, Characteristics of a laser beam, Semiconductor Laser, CO2 Laser, Solid Lasers, He-Ne Lasers, Gaseous Lasers.

Version 1.0		0	0	0	6
<b>Total Contact Hours</b>	90				
Pre-requisites/Exposure	Practical exposure				
Co-requisites					

### **Course Objectives**

- 1. To learn how to carry out literature survey
- 2. To be associated with an area of research/research project and contribute towards domain knowledge.
- 3. To learn the art of technical report writing
- 4. To learn the art of verbal communication with the help of modern presentation techniques.

#### **Course Outcomes**

On completion of this course, the students will be able to

- CO1. Carry out the extensive literature survey.
- C02. Learn to write and present technical reports/articles.
- CO3. Learn to analyze various methods and techniques applicable to the topic to study and contribute to domain knowledge.
- CO4. Learn to analyze/evaluate the result of the experiment carried out and present the results using data visualization methods.

## **Catalog Description**

- 1. Students will be divided among faculty members of the Department for the supervision of the research work.
- 2. In the first week of Semester IV, each faculty member will assign a suitable research topic to the students from the selected topics in the areas of chemical sciences.
- 3. The student will work on the assigned research topic during semester VI in regular consultation with his/her assigned teacher.
- 4. The student will write a dissertation based on the research work carried out during Semester IV and prepare two copies to be submitted to the office of the Head of the Department duly signed by the student and the supervisor in the sixth week of IV semester or a date decided by the HOD of the department.
- 5. Before preparing power point presentation and submission of dissertation, each student has to deliver a seminar talk on his/ her research project work on a date fixed by HOD, necessary suggestions has to be incorporated in the final draft of dissertation.
- 6. The student will make a power point presentation based on the work carried out and mentioned in the dissertation to the board of examiners appointed by the University.

## Modes of Evaluation: Quiz/Assignment/ presentation/ extempore/ Written Examination Examination Scheme:

Components	Internal				Total
	(Interaction of				
	Student with	Relevance			100
	Supervisor)	of topic	Presentation	viva	
	•	(20)	(20)	<b>(10)</b>	
Weightage	50	20	20	10	
(%)					

## Relationship between the Course Outcomes (COs) and Program Outcomes (POs)

Mapping between COs and POs							
	Course Outcomes (COs)	Mapped Program Outcomes					
CO1	Carry out the extensive literature survey.	PO1, PO3					
CO2	Learn to write and present technical reports/articles.	PO1, PO5, PO8, PO9					
CO3	Learn to analyze various methods and techniques applicable to the topic to study and contribute to domain knowledge.	PO2,PO3,PO4, PSO1, PSO4					
CO4	Learn to analyze/evaluate the result of the experiment carried out and present the results using data visualization methods.	PO5, PO6,PSO3.PSO3
